All around comfort for light, fresh air and look-out
JET-system control for basic functions or individual automation of the
JET-ATMOSPHERE products

JET-SMARTCONTROL-AIR/-SUN

for comfortable control of electromotive accessories for
ventilation or for shadowing via for e.g.:
✓ comfort function: temperature display inside and outside,
control via temperature or brightness, automatic positioning
of a drive
✓ security function: control over the parameter wind and rain
(manual and automatic operation possible)
✓ energy function: frost protection / outside temperature stop
(only in case of automatic operation) for protection of the
functional components and to avoid energy loss resp. use
of solar earnings

Control variants
✓ JET-SMARTCONTROL-AIR
ventilation set for a ventilation element
✓ JET-SMARTCONTROL-SUN
shadowing set for a shadowing element

Consisting of:
✓ a weather station for acquisition of the parameters
wind, rain, outside temperature and brightness
✓ a control element with integrated inside temperature measu-
rement to analyze all parameters, for manual control and for
programming the ventilation/shadowing function as well as
display of the operating mode

Product advantages:
✓ comfortable and intuitive operation
✓ individual programming
✓ automatic mode for more comfort and secure function
also in case of absence
✓ ideal also for retrofitting thanks to the radio contact between
control element and weather station (low cabling effort)
JET-SMARTCONTROL-COMPLETE/-COMPLETE PRO

for comfortable control of electromotive accessories for ventilation or for shadowing of complex applications; i.e. organization of also different functions in several rooms via for e.g.: 

- **comfort function**: touch-screen display; temperature display inside and outside; display of light intensity, sun data, wind speed and humidity; control over time, position of the sun, temperature, air humidity or brightness; input and output for additional equipment 

- **security function**: control over the parameter wind, rain and frost (automatic function can also be used for presence detection) 

- **energy function**: frost protection / outside temperature stop (only in case of automatic operation) for protection of the functional components and to avoid energy loss resp. use of solar earnings

Consisting of:

- a weather station for acquisition of the parameters wind, rain, outside temperature, brightness and of the GPS signals 

- a control element with internal or external inside temperature and air moisture measurement to analyze all parameters, for manual control and for programming the ventilation/shadowing function as well as display of the operating mode

Product advantages:

- comfortable and intuitive operation via touch-screen display 

- individual programming 

- automatic mode for more comfort and secure function also in case of absence 

- depending on equipment up to 10 groups can be controlled 

- depending on equipment up to 4 multifunctional outputs for e.g. heating unit, cooling system, alarm system, illumination, roof gutter heating, ventilation devices, dimmer etc. 

- depending on equipment up to 4 multifunctional inputs for e.g. smoke detector, motion detector, status of air conditioning systems (for interruption of ventilation), automatic reset etc. 

- connection of up to 10 control buttons is possible 

- 32 free radio channels for connection of several remote controls 

- connection of camera is possible 

- KNX interface available

Control variants

- JET-SMARTCONTROL-COMPLETE complete control for complex control of up to 4 drive groups

- JET-SMARTCONTROL-COMPLETE-PRO complete control for complex control of 4 up to 10 drive groups
